

## Operating Tips

### **Please read operating tips prior to use!**

Failure to do so could result in product loss.

#### **Things that will affect the temperature of your refrigerated box.**

- Number of door openings
- Duration of door openings
- Temperature of product being loaded
- Amount of product being loaded
- Moisture content of product
- Air flow surrounding product
- Outside temperature
- Outside humidity
- Box is in shade or direct sun
- Formation of ice on evaporator
- Defrost cycles
- Slope or angle of trailer
- Attempting to use as a flash freezer

#### **What you can do to optimize the performance of your refrigerated box.**

- Minimize the number of door openings
- Minimize the duration of door openings
- Minimize moisture inside
- Store product on pallets or shelves
- Keep product away from ceiling and evaporator
- Park in shade, out of the sun
- Defrost cycle is pre-programmed at every 3 hrs. Manual defrost may be initiated if heavy ice build up is found on evaporator
- Park tow-trailers with nose slightly down, to allow water to drain out of the hoses, and onto the ground
- Turn refrigeration unit off, if doors will be open for extended use, ie, loading. Or when not in use.
- Refrain from using unit to flash freeze (reducing product temperature quickly)
